Announcement to External User

As Littlepay, we offer the best trip fare for customers which means if there is a product that offers multi capping only one cap which results in the best fare would be selected. Some merchants reported that listing all the caps is resulting in erroneous reporting and they need a clear way to identify which cap was applied.

To make it easier for merchants to clearly identify which adjustment cap was selected for a specific trip, a new flag is introduced which makes it easier for merchants to identify which adjustment payment was selected if a micropayment has multiple adjustment payments.

An adjustment_id for micro-payments with applied status true is the selected adjustment for that micro-payment.

Instructions for usage

Field Name	Data Type	Description / Comments
micropayment_id	String	Identifies the micropayment that the adjustment belongs to. Can be used to join to the Micropayment feed.
adjustment_id	String	Uniquely identifies the adjustment
participant_id	String	Identifies the participant that the adjustment belongs to.

		Can be used to join to the Participant feed.
